IはListening Testです。試験開始1分後に放送を始めます。

I Listening Test 1

- 1 a) Because he can't communicate with his friends.
 - b) Because he feels down when he compares himself to others.
 - c) Because he doesn't have time to do it.
 - d) Because he dislikes communicating through email.
- 2 a) Watching her phone screen.
 - b) Using hemp bedding.
 - c) Bathing just before going to bed.
 - d) Light exercise before bed.
- 3 a) Effect of reading.
 - b) Method of meditation.
 - c) Time management.
 - d) Dealing with stress.
- 4 a) Solving labor shortages.
 - b) Support for foreign workers.
 - c) Population growth of the elderly.
 - d) Period of childbirth and childcare.
- 5 a) He believes that personal circumstances do not affect work.
 - b) He believes that the workload will increase depending on the choice of work location.
 - c) He believes that private life and work are not related.
 - d) He believes that not coming to the office will decrease the productivity of the company.

Listening Test 2 (See your answer sheet.)

I Read the following passage and answer each question.

FUKUOKA — The idea came to him after his grandmother lost her eyesight. Instead of a sidewalk of asphalt, could one be made with something else that is safer for the visually impaired? The answer was wood, which also made it eco-friendly. Kyushu University Associate Prof. Akihiko Higuchi is now leading a team that is refining a sidewalk it created using wood from cedar trees, with the aim of preventing the visually impaired from accidentally entering a road by (a) make a different sound from asphalt when hit with a cane. The project also incorporates the United Nations Sustainable Development Goals (SDGs) by using wood, as well as by (b) from recycled plastic bottle caps. By (c) on top of the beams, it creates a cavern under the walkway, enhancing sound that travels through it — such as the tapping of a cane. As cedar has a certain softness, it also provides a different feeling than (d).

Higuchi, who teaches landscape design, started his research in 2007 after his grandmother lost her eyesight due to an illness. At first, the team made a sidewalk with a rough surface, but found it was not much different than a conventional sidewalk. Then, the team tried a sidewalk like a wooden deck and found it (①). They chose cedar as a material as it is relatively easy to procure. The team carried out an experiment in which 101 visually impaired people were asked to tap on three different sidewalk-like structures with their canes. One was made of concrete, another asphalt, and the third cedar. Ninety-eight of them could distinguish the difference in sound.

Chizuko Hashiguchi, 71, a participant in the study from Fukuoka, said she had an incident on a sidewalk a year ago. When she tried to go around a car parked on the sidewalk, she lost her sense of direction and didn't notice when she walked out into the road. A passerby called "Watch out!" and pulled her back. "It's easy to recognize because of the sound as I tapped," Hashiguchi said about walking on the cedar walkway. "It's also a different feeling while walking, and I would notice if I stepped off it. I hope it will be built on streets that are on public transportation routes," she added. B

II Read the following passage and answer each question.

Instructionism leads to shallow knowledge in a subject. And shallow knowledge does not support creativity. Fortunately, research now shows us the kind of knowledge that does: it's creative knowledge, and it's different from shallow knowledge in just about every way.

With creative knowledge, you understand the material you're learning, and you know how to think with it. With shallow knowledge, you memorize events that happened; with creative knowledge, you can explain why these events took place. Shallow knowledge includes a lot of facts that you've memorized; with creative knowledge, you understand where these facts came from and how we know that they're true.

Shallow knowledge is a collection of facts about the world, such as the following:

- The correct spellings of words
- The (①) of the letters on the standard QWERTY keyboard
- The multiplication tables
- The chemical structure of water (H_2O)

Personally, I think that students need to learn all of these things. I'm sure that you can add your own very long list. If teaching for creativity means that we have to stop teaching for subject-area knowledge, then creativity is going to lose out every time. It's a common criticism of progressive education that it's not rigorous enough, and that students don't learn important facts and skills.

Students don't become less creative when they memorize facts. And students don't become more creative when you stop teaching them facts. To be creative in a subject, you need to memorize a lot of shallow knowledge. Students need to learn vocabulary to be (③), and many creative writers use a larger vocabulary than the rest of us. Students need to memorize a lot to do math calculations, including the multiplication tables, or the procedures for how to add fractions. I use athis kind of knowledge when I'm out in the garage, measuring parts for my craft projects.

Creative knowledge includes shallow knowledge—the same facts, skills, and procedures that are taught in instructionism. They form patterns that give them depth and meaning.

From studies of scientific expertise, we know that scientific creativity is grounded in bundles of knowledge, not small pieces of shallow knowledge. Cognitive psychologists call the small pieces of shallow knowledge chunks (Gobet et al., 2001), and disconnected chunks of knowledge don't support creativity. Chunks are the elemental "(⑤)" of knowledge, the smallest thing that can be learned. In shallow knowledge, each chunk is very small. In science, such chunks include naming the kinds of clouds or the three kinds of rocks, or knowing how to spell cirrus (clouds) and metamorphic (rocks).

In instructionism, students learn small pieces of knowledge, one by one, one after another. In guided improvisation, students learn the same chunks of shallow knowledge that they would learn from instructionism, but they learn those chunks bundled together in a broader understanding of the subject. С Instructionism teaches students to memorize the names of each of the 50 states in the United States—their shapes, the names of their capitals, and what year they joined the union. But with creative knowledge, students will understand how to think about the social and political dynamics that resulted in the (6) of that state, and why the state has the shape it does. I still remember winning a prize in elementary school, when I memorized the 50 state capitals. But I didn't understand much about the history of the states until a few years ago, when I started watching the wonderful TV show How the States Got Their Shapes.

Creative knowledge includes a lot of shallow knowledge. But those chunks of knowledge are connected into rich conceptual structures where students can see why they're learning it, and how it makes sense in a deeper conceptual structure.

[Modified from "THE CREATIVE CLASSROOM Innovative Teaching for 21st. Century Learners" (2019)]

	ア	domiciles		templates	ウ	textures	エ	locations
(3)) .	ア	reticent	1	11.	ゥ	sinewy	エ	verbal
(⑤):	ア	atoms	1	conflicts	ウ	means	エ	aggregations
(6):	ア	isolation	1	federation	ウ	creation	エ	demise

- Creative knowledge brings together chunks of shallow knowledge in bundles that form complex wholes.
- ウ But unlike in instructionism, these pieces of knowledge aren't isolated chunks; they're linked together in rich conceptual networks.

英語 大問 I (Listening Test)

Listening Test. This test consists of two parts, Listening Test 1 and Listening Test 2. Write your answers on your answer sheet following each instruction.

[3 sec.]

Listening Test 1. Look at Listening Test 1 on your question sheet. In this test, you will listen to five dialogues. After each dialogue, you will listen to a question. Choose the best answer for each question and write a, b, c or d on your answer sheet. The dialogues will be read just one time. You will have 15 seconds to choose the best answer for each question. Now, let's begin.

[3 sec.]

No. 1

- M: I've been thinking about quitting social media lately.
- W: Why? Is it because you don't have time for social media?
- M: That's not it. It's tiring to keep up with my friends' posts and comments, and I often feel down when I compare the happy life of others to my own.
- W: That's tough. But won't quitting social media reduce your communication with your friends?
- M: I don't think so. Lately I've been communicating more through email. In addition, I'm starting to think it's important to meet in person and have conversations too.

Question: Why does the man want to quit using social media?

[15 sec.]

No. 2

- W: Is there anything you can do to help you sleep better?
- M: I try not to look at my phone screen before going to bed because it will keep me awake. Also, I do some light exercise before going to bed. How about you?
- W: I try not to take a bath just before going to bed.
- M: Why?
- W: It would be difficult to fall asleep because I would feel hot.
- M: I see. If you use hemp bedding, you can sleep cool and comfortable.
- W: That's good.

Question: What makes it difficult for the woman to fall asleep?

[15 sec.]

No. 3

- M: Recently, I've been feeling depressed.
- W: Did something happen?
- M: I'm so busy at work. Are there any good ways to reduce stress?
- W: How about going for a walk or reading? I think it will change your mood.
- M: That's good. Is there anything else?
- W: A friend of mine said that meditation is good for relaxing.
- M: I see. I'll try it.
- W: It will take some time to get used to it, but I think it will help you.

Question: What is the main topic of the conversation?

令6 兵庫県公立学校教員採用候補者選考試験

英語 大問 I (Listening Test)

[15 sec.]

No. 4

- M: Lately, I've been hearing about labor shortages in companies.
- W: I saw it on the news, too.
- M: I often see a lot of foreign workers at nearby companies.
- W: Because of the different cultures and languages, there must be support for accepting foreigners.
- M: That's right.
- W: In order to solve the problem of labor shortages, we need to improve the working environment for the elderly and women, too.
- M: My office is working to support women who have left the workplace due to childbirth or childcare to return to work.
- W: Good. In any case, I think it's important for people from various backgrounds to be able to work as they like.

Question: What is the main topic of the conversation?

[15 sec.]

No. 5

- M: Have you ever thought about work-life balance?
- W: I'd like to have time for caring for my parents and gardening as a hobby. So, I was thinking about how to keep a good balance between work and personal life.
- M: Did you have any good ideas?
- W: I wondered if there was a way to choose between working hours and where I worked. After that, I talked to my boss.
- M: What was his reaction?
- W: He was against working from home, but he was in favor of flexible working hours. He believes that working from home will reduce the company's productivity.
- M: So, remote work seems difficult, but if you have flexibility in your working hours, you will be able to balance work and private life better.

Question: Why is the woman's boss negative about working from home?

[15 sec.]

Listening Test 2. In this test, you will listen to a passage about what we need to consider before making a lesson plan. Look at your answer sheet, which is an incomplete summary of this passage. You have twenty-five seconds to read the answer sheet.

[25 sec.]

Now you will listen to the passage. Fill in each blank from ① to ⑥ with a suitable word. The passage will be read twice. Now, let's begin.

[3 sec.]

【本文】

Before we start to make a lesson plan we need to consider a number of crucial factors such as the language level of our students, their motivation, and their different learning styles. We also need a knowledge of the content and organization of the syllabus we are working with, and the requirements of any exams which the students are working towards. Armed now with our knowledge of the students and of the syllabus we can go on to consider the four main planning elements:

令6 兵庫県公立学校教員採用候補者選考試験

英語 大問 I (Listening Test)

- Activities: when planning, it is vital to consider what students will be doing in the classroom. The best lessons offer a variety of activities within a class period. Students may find themselves standing up and working with each other. The same lesson may end with a whole-class discussion or with pairs writing dialogues to practice.
- Skills: we need to make a decision about which language skills we wish our students to develop. This choice is sometimes determined by the syllabus or the coursebook. However, we still need to plan exactly how students are going to work with the skill and what sub-skills we wish to practice.
- Language type: we need to decide what language to introduce and have the students learn, practice, or use. One of the dangers of planning is that where language is the main focus it is the first and only planning decision that teachers make. Once the decision has been taken to teach the present continuous, for example, it is sometimes tempting to slip back into a drill-dominated teaching session which lacks variety and which may not be the best way to achieve our aims.
- Content: lesson planners have to select content which has a good chance of provoking interest and involvement. Even where the choice of subject and content is to some extent dependent on a coursebook, we can still judge when and if to use the coursebook's topics, or whether to replace them with something else.

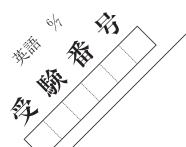

With all of these features in mind we can finally pass all our thinking through the filter of practical reality, where our knowledge of the classrooms we work in, the equipment we can use, and the time we have available all combine to focus our planning on what we are actually going to do.

[10 sec.]

Listen again. (※本文の繰り返し)

[10 sec.]

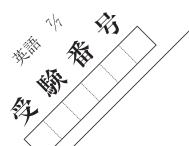

This is the end of the listening test.
